*1: BS3/BS4 are available in specific countries.
*2: Optional Mimaki Bukl Ink System (MBIS3) is required for using 2L ink pack.
GREENGUARD Gold: Applicable products to this "GREENGUARD Gold certification" are acceptable for environments such as schools and medical facilities based on the most strict global standard of chemical

Some of the samples in this catalog are artificial renderings. Specifications, design and dimensions stated in this catalog may be subject to change without notice (for technical improvements etc). corporate names and merchandise names written in this catalog are the trademark or registered trademark of the respective corporations. Inkjet printers print using extremely fine dots, so colors may very slightly vary after replacement of the printing heads. Also note that if using multiple printer units, colors could vary slightly from one unit to other units due to slight individual differences. Please note that descriptions and data in this catalog are as of October 2019.

Print & Cut Inkjet Printer equipped with silver ink

CJV300PIusseries CJV300-130/160Plus

CJV300-130/160Plus

High-performance inkjet printer equipped with eco-solvent ink, which is a print & cut printer wherein environmental protection is achieved by means of additional ecology & economy as well as by work efficiency

> Labor-saving & Efficiency

3 Plus

High image quality Stability

Ecology

Economy

Labor-saving process & **Business efficiency are additional features**

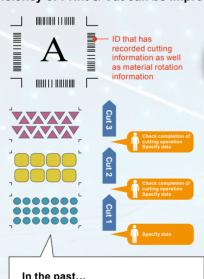

Adoption of ID Cut!

- With this single unit, work efficiency of Print & Cut can be improved -

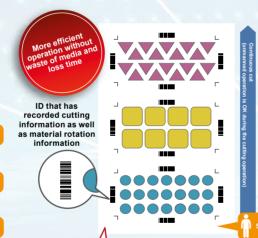

What is ID Cut?

When the printing operation is performed using CJV300-130/160 Plus and RL6 Plus, ID that has recorded cutting information as well as material rotation information is printed out simultaneously. When the register mark sensor reads such ID, it asks the applicable PC to send cutting data information to it, and starts the cutting operation automatically. Since ID is printed out in four directions, a correct cutting operation will be performed because the machine recognizes an orientation of any media, regardless of orientation of such

It eliminates the need for any operator to give cutting instruction to each data from RIP software unlike before while it makes it possible to do cutting operation, and prevents media loss due to data transmission mistake.

Any operators scanned register marks and specified cut data after each cutting job was completed

ID Cut function of CJV300-130/160 Plus

This single unit of printer alone enables labels,

stickers, car lapping films or the like to be created.

In the ID Cut function, even if there are a large number of types of cut data, any operator performs manual operation only once at first!

Ethernet supported!

- Support for Ethernet connection implements free and efficient work environment -

To the conventional connection method to PC for RIP, Ethernet connection has newly been added.

Unlike the conventional USB connection, connection via Ethernet can be established via network cable, and thus connection to a printer from any PC within network is now available. More free and efficient work-site environment can be put in place, by editing data using any PC in your office, then sending print data directly to a printer in your work operation site, for example.

Ecology & Economy are newly added features

Adoption of Eco-cartridge

A new Mimaki Eco-cartridge(*) has been adopted with a replaceable 600ml ink pack. The Eco-cartridge is a reusable plastic case with a 600ml ink pack that can be replaced by customers. Using the Eco-cartridge will reduce the disposal of plastic 440ml cartridge every time ink is replaced, leading to environmental protection. In addition, the increased ink capacity reduces the need for cartridge replacement and add labor-saving process & business efficiency. The 8 colors (C, M, Y, K, Lc, Lm, Lk, Or) of SS21 600ml ink pack are newly prepared for the Eco-cartridge application.

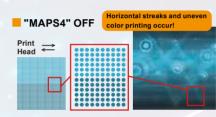

(*) The Mimaki Eco-cartridge is only compatible with 600ml ink packs.

Newly added functions to support higher image quality and stability

MAPS4

In ordinary textile printers, the straight pass boundaries often results in bandings and discoloration due to slight misalignment. The "MAPS4 (Mimaki Advanced Pass System 4)" functionality provides gradation to printed pass boundaries and reduces banding and uneven color, achieving a beautiful printing result.

Banding occurs at pass boundaries. Image quality is damaged seriously because horizontal streaks Printing in gradation

Because printing pass boundaries are faded in gradation, a beautiful image quality is ensured by

Adoption of newly designed feeding & winding mechanism

- "End-face guide" for maximum loadable media in weight (45kg) comes equipped with as standard -

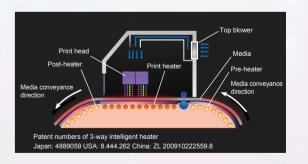

Through renewal of the older feeding & winding mechanism, stability of media conveyance has been improved, and thus the maximum loadable media weight has changed from 40kg to 45kg, making longer-sheet printout available. Also, it is provided with such an end-face guide as standard that prevents edge-surface meandering when any media are wound up, supporting high-quality printout through stable winding

Our original and patented technology

Mimaki's original 3-way intelligent heater

This 3-way intelligent heater fixes ink droplets placed on media in position. While temperature is controlled with Mimaki's original technology, heat is applied to media, and ink droplets are fixed in position with excellent color development and high-quality image being maintained. It achieves both stable color development and easy handling after output.

- Pre-heater: Heats media to optimum temperature before printing
- · Print heater: Dries ink droplets placed on media prior to ink bleeding, improving color development
- · Post-heater: Accelerates ink drving, realizing a stable winding
- · Top blower: Provides air blow to support ink drying

Silver ink achieves impactful expression additionally!

SS21 silver ink can be used. As compared with a conventional silver ink, its brightness which is almost 1.67 times* higher than that of it has been materialized. This makes it possible to provide brilliant and beautiful metallic expression.

* Comparison with our conventional ES3 ink

Providing logo or background with silver color allows for impactful expression
